BRICK WORK · MILESTONE C

New functionality

Goal: the new functionality chosen after B ships. Its issues are picked from the roadmap once B has shown what daily use needs.

Rough length: set after B · Decision: issue #98 · Gate: issue #99

WHY WAIT

Pick new features from daily use, not from the backlog’s length

The backlog

Dozens of open enhancements sit on the public roadmap: buildable sets, part-out value, a shopping list, a sale price and more.

The signal

B shows what working with the real inventory actually needs. That reorders the board.

The roadmap stays the backlog. C takes only what the decision picks; the rest stays on the board.

THE DECISION · #98

How C gets its issues

1	After B’s gate, a roadmap-prioritise run scores the open enhancements (Value, Effort) with what B taught.
2	Ulf moves the cards he disagrees with on the board.
3	The Now column becomes C’s issues, each with its Blocked-by links; this deck gets C’s rough length.

THE GATE · #99

What was chosen ships on prod

- Every issue in C closed, or moved back to the roadmap with Ulf’s yes
- Release tagged with release notes
- Close-out: this deck becomes the milestone’s status report
